

Docket No. AUS920010083US1

ABSTRACT OF THE DISCLOSURE

5 METHOD AND APPARATUS FOR HANDLING REQUESTS FOR CONTENT IN
A NETWORK DATA PROCESSING SYSTEM

10 A method, apparatus, and computer implemented
instructions for handling a request for content in a data
processing system. The request for content is received.
A content source is identified from a plurality of
content sources using the request to form an identified
content source. The content is retrieved from the
15 identified content source. A template is applied to the
content to generate a web page, wherein the template is a
template associated with the identified content source
from the plurality of content sources.
